

WHAT IS CLAIMED IS:

1. The positive-type photosensitive composition comprising alkaline soluble organic high molecular substance comprising epoxy resin having phenolic hydroxyl group or reacted with phenolic hydroxyl group and photo-thermal conversion substance for absorbing infrared rays of an image exposing light source and converting it into heat, and as adherence characteristic reforming agents, the composition includes any one of

- (1) polyvinyl polypyrrolidone/polyvinylacetate copolymers
- (2) polyvinylbutyral
- (3) styrene/maleic acid copolymers
- (4) vinylpyrrolidone/dimethylaminoethylmethacrylate copolymers
- (5) terpolymers of vinylpyrrolidone/caprolactam/
dimethylaminoethylmethacrylate
- (6) terpenephenolic resin
- (7) alkylphenolic resin
- (8) polyvinylformar resin
- (9) melamine/formaldehyde resin
- (10) polyvinyl acetate, and
- (11) ketone resin.
